## Agenda for 2024 2025 and Beyond

Our Team could not be more excited with the imminent launching of exchange traded funds, or ETF's, by the largest U.S. fund managers.

To quote Larry Fink, CEO of Blackrock, the largest asset manager in the world with \$9.4 Trillion AUM, when asked what about the 'future value of Bitcoin, his only reply was – "what is the value of human freedom".

Signature DeFi® is transferring over eighty percent (80%) of all trading activities in 2024, after January 11th, the imminent approval for the first ETF fund, to Bitcoin, in long positions, and variable leverage to Bitcoin.

Given the incoming funds for Bitcoin, to be 5x (five hundred percent) plus current inflows, the valuation, accordingly, price levels for BTC will reflect this watershed moment in the emergence of Bitcoin as a mainstream asset, for the first time in history.

Capital inflows currently to Bitcoin in 2022/2023 have been averaging \$50-70 Billion annually, producing a price currently, 4th Quarter of 2023, of \$37,000. This will be dwarfed by estimated inflows, or capital purchasing Bitcoin of \$200 to \$300 Billion at a minimum, given that each of the leading capital fund managers – Blackrock, Fidelity, Greyscale, ARK and others need to purchase Bitcoin to offer their respective clients ETF accounts. This will certainly yield a 3x to 20x multiplier for Bitcoin valuation, by the simple laws of economics, supply and demand.

This is in addition to the 'halving event' of Bitcoin, in April 2024, where the supply of Bitcoin for sale will be reduced by miners by one-half of current levels.

We see, clearly, a \$180,000 price level for Bitcoin by mid-year 2024, on its way to even loftier price points as the decoupling of Bitcoin from inflation-impacted Fiat currencies continue to devalue, given the record-setting deficits by the Treasury, not only in the United States, but most of the world, of over 100% of respective GDP levels.

Decoupling will also take place with Bitcoin and technology assets, NASDAQ, and other risk assets. Bitcoin will be seen as a hedge on both inflation as well as a safe-haven asset, preferable to Gold, which has not appreciated significantly at the \$2,000 per ounce level.

Join us, profiting from the best-performing asset annually for the past 10 years – Bitcoin, and our select diversification with Ethereum and leading cryptocurrency top performers. We select only among the top 50 crypto by market capitalization, for trading, apart from the market leaders, to continue to outperform.

Join Signature DeFi® today, the true leaders in decentralized finance. 2024 is promising to be the best year-ever in digital currency, the future of money with no third parties.

Sincerely,  
Max Elliott  
CEO

Signature Defi®  
Eurasia Digital Corp.

# Data Report

Crank up your wealth-building machine by eliminating emotion, slow reaction-time, and lack of experience from your crypto trading.

## What is Signature DeFi's trading strategy?

- Signature DeFi utilizes expert analysts to trade Bitcoin Perpetuals, taking both long and short positions, and utilizing an ensemble model aiming to exceed Bitcoin performance.

## How do Signature DeFi's analysts attain alpha?

- Our expert traders use a return distribution algorithm over multiple time frames, from daily to hourly, to detect trend changes early. Trades also use the Fear & Greed Index to make the most informed trades automatically.

## What are the competitive advantages of Signature DeFi's trading bot?

- We focus on staying power with low-risk, long-term profitability. Constant optimization, fully automated tactical entry and exit points, and secure offsite funds storage sharpen our competitive edge.

## How often do our team optimize our trading methodology?

- Our dedicated team continually updates and optimizes our Binary Scalping trading strategy to align with market trends for sustained performance.
